-A new process of cleaning pictures this wise sorrel (was not the wisest has recently been discoved. The great difficulty has always been to get off the old varnish, which by length of time, has become almost incorporated with the color underneath, so that any method employed to remove the upper surface is pretty certain to carry of with it the delicate lines below. Some picture-I wish I could impress upon every dealers use corrosive substances, which farmer the value of good fruit for family make the matter worse. An ingenious system has been discovered at Amsterhave every kind of ripe fruit in its seadam, which consists in simple spreading a coating of copaiba balsam on the old painting, and then keeping it face downward over a dish of the same size filled with cold alcohol at an altitude of about three feet. The vapors of the liquied impart to the copaiba a degree of semifor it. A portion of the garden should be devoted to them. Get the ground nicely plowed and harrowed, and plant

fluidity, in which state it easily amalgamates with the varnish it covers. Thus the original brilliancy and transparency are regained without injuring the oil painting; and when the picture is hung up in its place again, two or three days after, it looks as it had been varnished afresh. The inventors have given the public the benefit of their discovery. The process has the merit of being a short one as compared with the old -Some curious experiments were

methods. made a few years ago, by Prof Tyndall, on "sensitive flames." He observed that in a drawing-room the lights kept time with the music by their flames becoming longer or shorter, according to the various notes produced on the piano. This he justly attributed to the vibrations caused in the air, and he soon, by direct experiment, confirmed this view. This experiment was applied to the measure of explosive substances in the following way: At a distance of five The Kittatinny is an excellent blackmeters from a flame he placed an anvil, on which he alternately laid fulminate of mercury and iodide of nitrogen, and and then caused their explosion by the stroke of a hammer. In this way he ascertained that the latter substance produced no effect on the flame, while the fulminate caused it to vibrate ac-Then, who can do without currants cording to the notes la, do, mi, fa, sol. Hence he concluded, not only the vibrations affected by the lodide cents on every coasting vessel, and over 60 cents on every coasting vessel which from the blood, and warding off bilious nate, but also that those of the latter only affected certain notes, excluding the intermediate ones. This settles itself upon some suitable resting

Sir John Colbach, in his dissertation is Swediaur's receipt. Bouillon, Laconcerning mistletoe, 1720, strongly recommends it as a medicine for epilepsy and all other convulsive disorders; adding, that this beautiful plant must have been designed by the Almighty "for further and more noble purposes than barely to feed thrushes, or to be hung up superstitiously in houses to drive away evil spirits," He refers to the veneration in which the Druids were held to the cures they performed by means of the mistletoe of the oak, "this tree being sacred to them, but none so that had not the mistletoe upon them." But Sir John endeavors to show the mistletoe of the crab, the lime, the pear, or any other tree, to be of equal vi-tue.

REMEDY FOR YELLOW FEVER. Mr. P. W. Nicholl, of Jersey, having seen the accounts in the papers of the fearful raviges of the vellow fever at Bermuda, writes as follows: "I have a French work stating that the common nettle (Urtica discia,), dried and reduc ed to powder, and used as a condiment for preparing food, is a preserver against this fearful malady. It is made into a liqueur and syrup in France, and is preferable to absinthe. I have succeeded in bringing this useful but despised plant into general use here with great benefit, as acknowledged by several medical men, both here and in London. To preserve it, it should be put in bottles, or any package which preserves it from damp and mildew. By its use a man can be his own doctor, and, if living in the country, without

any expense. It is a singular fact that steel dipped in the juice of the nettle becomes flex-Dr. Thornton, who made the medical properties of our wild plants his peculiar study, states that lint dipped in nettle-juice, and put up the nostril, has been known to stay the bleeding of the nose, when all other remedies had failed; and adds that fourteen or fifteen of the seeds ground into powder, and taken daily, will cure the swelling in the neck known by the name of goitre, without in any way injuring the general habit.

GYPSIES AND THEIR SECRET POISONS. Among other secrets of the Gypsy race is the art of preparing what they term the "drei," or "dri," a most deadand insidious destructive agent, and these varied remedies, many men and or which medical science knows no anidote. > An observer of the oyster says that mand over his temper, as never to be tion of the spat, which is, in its earlier moved with any thing that he could not hope to remedy; and by this, and a stages of development, of a creamy consistence and color. When the spat is mature it assumes the appearance of The Northern Pacific Railroad 7-30 First innocent amusements and enjoyments the scrapings of a slate pencil; the parent oyster then opens its shell, and a kind of mistiness is observable in the surrounding water. This is caused by the myriads of young oysters scattered in every direction. No sooner are these tiny creatures free from their mother than they assume the most active state of life and motion, dancing and gyrating up and down in eccentric columns. as midgets play in the evening sun-beams. Under the lens of a microscope you will see how exquisitely these little fellows are fashioned. A pair of tiny shells, the counterpart of those of the maturer oyster, encloses the vet rudimentary organs, while affixed to the mantle is a kind of tiny coronet, com-posed of minute hair-like appendages (cilia.) The violent and ceaseless vibration of these paddles serves to row place. Should it be the destiny of one of these fragile beings to become a settles itself upon some suitable resting place, to which it makes itself fast-no

grange, and Vogel, recommend the supone very clearly knows how-by the un ression of the muriate of lime and sulder valve or shell. The bristle-like oars hate of soda, to be replaced with caror cilia, no longer of any utility, disaponate of lime and magnesia; but this pear, and now, a permanent fixture, the alteration does not appear necessary, or baby oyster begins to grow. At about founded on sufficient chemical grounds a fortnight old it is not much bigger than a fair-sized pin's head, and at three Sea-water taken internally has been months about that of a split pea. Havconsidered beneficial in several malaing attained a year's growth under favdies; and, although not potable in civorable conditi ns, the young oyster will lized countries, it is freely drunk by have become as big as an ordinary half arious savage tribes. Cook informs us penny, while at four years' growth they that it is used with impunity in Easter are considered marketable.
